

Project Sprint #1

The Solitaire game is described in CS449HomeworkOverview. You should read the description very carefully.

In this assignment, you aim to specify the requirements (i.e., user stories and acceptance criteria) of the target software that allows a human player to play a Solitaire game. These requirements will be fully implemented by the end of sprint 3. The minimum features include **choosing the board size and type, starting a new game, making a move, determining if a game is over**. The following is a sample GUI layout.

Use the following tables to document your user stories and acceptance criteria.

You are required to use the free ChatGPT or another LLM to complete two user stories and two of their respective acceptance criteria. You must ensure that the generated user stories are correct and fix them if not. At the end of the submission, provide screenshots of your LLM prompts and answers, along with the description of errors the LLM made that you had to correct. Points will be deducted if no screenshots/description are provided.

For the other user stories and acceptance criteria, you are not required to use LLM.

I. User Stories (3 points)

- **User Story Template:** As a <role>, I want <goal> [so that <benefit>]

ID	User Story Name	User Story Description	Priority	Estimated effort (hours)
1	Choose a board size	As a player, I want to choose board size to start the game.	1	2
2	Choose the board type	As a player, I want to choose the board type to start the game.	4	2
3	Start a new game of the chosen board size and type	As a player, I want to start a new game with the chosen board size and type	5	4

ID	User Story Name	User Story Description	Priority	Estimated effort (hours)
4	Make a move in a game	As a player, I want to make a move when it is my turn to	2	2
5	A game is over	As a player, I want to know when the game is over to score a round and to move on to the next game	3	3
6	New Game	As a player, I want to start over so I can start a new game sooner	6	3

II. Acceptance Criteria (AC) (12 points): Add/delete rows as needed.

User Story ID and Name	AC ID	Description of Acceptance Criterion	Status (completed, to Do, in Progress)
1. Choose a board size	1.1	AC 1.1 Given I can see menu showing chess board size When I click on it Then a list of options appears	
	1.2	AC 1.2 Given there is a list of board sizes When I click on the desired option Then the board sizes changes to reflect my choices	
	1.3	AC 1.3 Given a finished board to start When I click on the start button Then hide the setup buttons	
2. Choose the board type	2.1	AC 2.1 Given I can see menu showing chess board type When I click on the menu Then pop open a list of board types	
	2.2	AC 2.2 Given there is a list of board types When I click on the desired type Then the board sizes changes to reflect my choices	
3. Make a move in a game	3.1	AC 3.1 Given an empty space When I click on the second most adjacent piece Then remove/pop the piece and update score	
	3.2	AC 3.2 Given a piece is selected When I click on the peg Then it will highlight valid moves	
	3.3	AC 3.3 Given a piece is selected When I click on an invalid move Then nothing will happen	
4. Start new game given board configurations	4.1	AC 4.1 Given the configurations for the board are set When I click start game Then the board config sticks	
5. A game is over	5.1	AC 5.1 Given no more possible moves When it happens Then reveal final score and notify player	
6. New game	6.1	AC 6.1 Given a new game button And an ongoing game When I click on it	

User Story ID and Name	AC ID	Description of Acceptance Criterion	Status (completed, to Do, in Progress)
		Then it will reset the board to current configurations	
	6.2	AC 6.2 Given an ongoing game When I click on the new game button Then the score resets to 0

Chat logs:

Can you give me some examples of user stories for a game?

Here are some examples of user stories for a game, organized by category. They follow the standard format: "As a [type of user], I want [some goal] so that [some reason]."

I've used a fictional mobile RPG called "*Dragon Realm*" as a running example, but the patterns apply to almost any genre.

Core Gameplay

- As a **new player**, I want to play through a short tutorial so that I can learn the basic controls before the real challenge begins.
- As a **player**, I want to attack enemies with a single tap so that combat feels responsive and easy to pick up.
- As a **player**, I want to level up my character by gaining XP so that I feel a sense of progression and can take on stronger enemies.
- As a **player**, I want to save my game at checkpoints so that I don't lose hours of progress if I die or quit.
- As a **player**, I want to pause the game at any time so that I can handle real-life interruptions.

Progression & Rewards

- As a **player**, I want to unlock new abilities as I level up so that combat stays fresh and rewarding.
- As a **player**, I want to collect loot drops from defeated enemies so that I'm motivated to keep fighting.
- As a **player**, I want to see a clear progress bar toward the next level so that I know how close I am to a reward.
- As a **completionist**, I want to earn achievements for difficult feats so that I have goals beyond the main story.

Social & Multiplayer

- As a **player**, I want to invite my friends to a co-op match so that we can play together.
- As a **competitive player**, I want to be matched against players of similar skill so that matches feel fair and fun.
- As a **player**, I want to chat with my guild members so that we can coordinate raids.
- As a **player**, I want to see a leaderboard of my friends' high scores so that I have something to compete against.

Monetization

- As a **free player**, I want to earn premium currency through gameplay so that I can buy cosmetic items without spending money.
- As a **paying player**, I want to purchase a cosmetic skin so that my character looks unique.
- As a **player**, I want to watch an optional ad to get a bonus reward so that I can progress faster without paying.

UI, Settings & Accessibility

- As a **player**, I want to remap my controls so that the game fits my preferred playstyle.
- As a **player with color blindness**, I want a colorblind-friendly mode so that I can distinguish important game elements.
- As a **player**, I want to adjust the volume of music and sound effects separately so that I can customize my experience.
- As a **mobile player**, I want the game to work in portrait and landscape so that I can play however I'm holding my phone.

Technical / Non-Functional (often written as stories too)

- As a **player**, I want the game to load in under 5 seconds so that I don't get bored waiting.
- As a **player**, I want my progress to sync across devices so that I can continue playing on my tablet.
- As a **player**, I want the game to run at 60 FPS so that combat feels smooth.

Can you give me examples of Acceptance Criterias GWT?

Absolutely. Acceptance criteria in **Given / When / Then** format define the conditions that must be true for a story to be considered "done." Here are examples mapped to the user stories from before.

Combat

Story: As a player, I want to tap an enemy to deal damage so that I can defeat it.

text

Copy Download

```
Given an enemy is on screen and alive,  
When I tap directly on the enemy,  
Then the enemy loses HP equal to my attack stat.
```

```
Given an enemy is on screen and alive,  
When I tap empty space (not on the enemy),  
Then no damage is dealt.
```

```
Given an enemy's HP reaches 0,  
When the final hit lands,  
Then the enemy plays a death animation and is removed from the screen.
```

Story: As a player, I want my attack to have a 0.5s cooldown so that I can't spam it infinitely.

text

Copy Download

```
Given I just attacked,  
When I tap again within 0.5 seconds,  
Then the attack is ignored and no damage is dealt.
```

```
Given I just attacked,  
When 0.5 seconds have passed,  
Then I can attack again.
```

Progression

Story: As a player, I want to earn 10 XP per enemy killed so that I progress toward the next level.

text

Copy Download

```
Given I have 0 XP and need 100 XP to level up,  
When I kill one enemy,  
Then my XP increases to 10.
```

```
Given I have 95 XP and need 100 XP to level up,  
When I kill one enemy,  
Then my XP becomes 105 and I level up.
```

Story: As a player, I want a "Level Up!" notification when I hit the XP threshold so that the moment feels rewarding.
